

## **MODEM DETAILS**

Front Panel

LED's – see page 3 for details

V3 Wiring Diagram Cory Loukides 9/25/2017

| LED      | Color/Pattern             | Description  | LED Power Saving<br>Mode <sup>a</sup> |
|----------|---------------------------|--|---------------------------------------|
| Power    | Off                       | No power or input voltage ≥ 36 VDC or ≤ 7 VDC  |                                       |
|          | Solid Green               | Power is present.  |                                       |
|          | Green with Amber<br>Flash | Power is present and the gateway has a GPS fix.  |                                       |
|          | Solid Red                 | Standby mode   |                                       |
|          | Flashing Green            | When you press the reset button, flashing green indicates when to release the reset button to reboot the gateway.  |                                       |
|          | Flashing Red              | When you press the reset button, flashing red indicates when to release the reset button to reset the gateway to the factory default settings.   |                                       |
|          | Flashing Amber            | When you press the reset button for more than 20 seconds, flashing amber indicates when to release the reset button to enter Recovery mode. (See Recovery Mode on page 48.)  |                                       |
| Signal   | Solid Green               | Good signal (equivalent to 4–5 bars)   | Off                                   |
|          | Solid Amber               | Fair signal (equivalent to 2–3 bars)   | Off                                   |
|          | Flashing Amber            | Poor signal (equivalent to 1 bar) If possible, Sierra Wireless recommends moving the gateway to a location with a better signal.   |                                       |
|          | Flashing Red              | Inadequate (equivalent to 0 bars) Sierra Wireless recommends moving the gateway to a location with a better signal.  |                                       |
| Network  | Solid Green               | Connected to an LTE network  | Off                                   |
|          | Solid Amber               | Connected to a 3G or 2G network  | Off                                   |
|          | Flashing Green            | Connecting to the network  |                                       |
|          | Flashing Red              | No network available   |                                       |
|          | Flashing Red/<br>Amber    | Network Operator Switching is enabled, but the gateway is unable to locate the required firmware. For more information, refer to the ALEOS Software Configuration User Guide (Admin chapter).  |                                       |
| Activity | Flashing Green            | Traffic is being transmitted or received over the WAN interface.   |                                       |
|          | Flashing Red              | Traffic is being transmitted or received over the serial port. This behavior only appears if the RV50 Series gateway is configured to display it. For more information, refer to the ALEOS Software Configuration Guide (Serial chapter).      |                                       |
|          | Flashing Amber            | Traffic is being transmitted or received over both the WAN interface and the serial port. This behavior only appears if the RV50 Series gateway is configured to display it. Refer to the ALEOS Software Configuration Guide (Serial chapter). |                                       |
| ALL      | Green LED chase           | Radio module reconfiguration/firmware update or Network Operator Switching is in progress.   |                                       |
|          | Amber LED chase           | ALEOS software update is in progress.  |                                       |

a. To configure LED Power Saving Mode, refer to the ALEOS Software Configuration User Guide (Services chapter).
